Sample Questions by Category

Below is a detailed examination of typical questions candidates may encounter, along with insights into what skills they assess.

1. Numerical Reasoning and Data Interpretation

These questions test the ability to interpret data and perform calculations relevant to air traffic operations.

1. **Sample Question:** An aircraft is flying at an altitude of 30,000 feet and is approaching a controlled airspace boundary. The aircraft's rate of climb is 500 feet per minute. How long will it take to reach 35,000 feet?
2. **Solution:** To ascend 5,000 feet at 500 feet per minute: $5000 / 500 = 10$ minutes.

2. Spatial Reasoning and Visualization

These questions evaluate a candidate's ability to interpret spatial information, crucial for understanding radar screens and traffic patterns.

1. **Sample Question:** You see three aircraft on your radar:
Aircraft A at 15 miles east, heading north at 250 knots;
Aircraft B at 10 miles south, heading east at 200 knots; and
Aircraft C at 20 miles northwest, heading southeast at 180

knots. Which aircraft poses the greatest potential conflict in the next 15 minutes?

2. **Answer Strategy:** Candidates must analyze speed, heading, and distance to predict possible conflicts, testing their situational awareness and predictive skills.
